Tutorial Objectives

After completing this tutorial, you will be able to:

• Understand the purpose of the RADAR tool
• Access and utilize the RADAR Report
• View and interpret Profile Scores

This tutorial will take about 20 minutes to complete.
RADAR Report Overview

RADAR is a Web-based, resident-level clinical and predictive risk management tool.

RADAR includes:

• Resident Profile Scores
• Quality Measures (QM) Alerts
• Resident historical data presented from MDS history
RADAR Report Overview (cont.)

RADAR Benefits:

• Provides a high level overview of all current residents
  – Identifies residents with clinical and risk concerns
  – Drill down for more details
    - Risk management
    - Care planning

• MDS 3.0 scales replace other required assessments

Excellent tool for Administrators and Managers
Steps for Using the RADAR Report

The following slides will guide you through the steps for using the RADAR Report:

• **Step One**: Login to PointRight

• **Step Two**: Access the RADAR Report

• **Step Three**: Drill down for details
Step One: Login to PointRight

1. Go to: www.pointright.com

2. Click Client Login
Step One: Login to PointRight (cont.)

3. Click the MDS Submissions & Reports link
Step One: Login to PointRight (cont.)

4. Enter your Log In information
   User Name
   Password
The password is case sensitive!

5. Click Log In.

Enter your Facility/Organization ID,
User Name and Password below.
Passwords are case sensitive.

Step Two: Access the RADAR Report

Roll the mouse icon over the Products tab. The Products drop-down menu displays.

In the Products drop-down menu, click RADAR. The RADAR screen displays.
Step Three: Drill-down for Details

The RADAR Report displays Profile scores so that you see at a glance what occurs with each resident.

Profile Scores are based on two categories of MDS scales: **Descriptive** scales and **Predictive** scales.
Profile Scores (cont.)

Descriptive scales identify the condition or outcome, and the severity of the condition. These scales focus on resident characteristics for ADLs, Cognitive Performance, Delirium, Mood, and Pain.

<table>
<thead>
<tr>
<th>Profile Scores</th>
<th>Cognition</th>
<th>Delirium</th>
<th>Mood (PHQ-9®)</th>
<th>Pain</th>

<td>11</td>
<td>0</td>
<td>7</td>
<td>-</td>
</tr>
</tbody>
</table>

- 0 0 1 0 0 1 7 9 9
- 1 3 0 0 0 1 7 9 10
- 1 3 0 0 0 1 8 8 3
- 0 5 0 0 8 2 7 2
**Profile Scores (cont.)**

**Predictive scales** identify specific risk factors that contribute to a resident developing a particular condition or outcome. These scales ‘predict’ the likelihood of an event within a specific period of time for **Falls**, **Frailty**, **Hospitalization**, and **Pressure Ulcers**.

<table>
<thead>
<tr>

Profile Scores (cont.):
Risk Profile Probability Tables

• To see additional information about RADAR’s Predictive Scales, please see the **RADAR Risk Profile Probability Tables**.
  – This information can be viewed and printed from the **RADAR** section of the Training page on the PointRight website.
Roll over a **Risk Profile** name to view information about that scale, including scale range and the high risk/high impairment cut point. Click on a resident’s score to view resident history and details.

<table>

</tr>
</tbody>
</table>

**BIMS** = Brief Interview of Mental Status
Lower score reflects increased impairment.
BIMS Range: 0-15
BIMS High Score = 9 Or Less

Click a resident’s score to drill down.
The Hospitalization Risk scale indicates a resident’s likelihood of being rehospitalized.

This example indicates that now may be a good time to address changes in the resident’s condition in the care plan to prevent rehospitalization.
Roll the mouse icon over any data point to see assessment information.

Click a point to view the MDS.
Historical Trending & Risk Scale Graphs (cont.)

Indicates multiple hospitalizations
Risk Scale MDS History

The **MDS Assessment History** displays below the trend graph.

- Roll over any MDS item header to see the coding details.
- Click on the **ARD** to see the MDS assessment.

Use the scroll bar to view all MDS items.
The QM column displays the CMS Quality Measures that will potentially trigger on the resident’s most recent MDS.

- Click the **QM Alert** link to view the triggers.
The QM triggers for the most recent MDS will appear in a new browser window.
• NOTE: if the resident is in the Long Stay sample you will need to **scroll down** to view the triggers.
QM Alerts (cont.)

Click the “Y” link to view the resident’s MDS History for that measure.
- MDS History will display in a new browser window.
Printing RADAR

1. Roll the mouse icon over the **Print** tab, and select **Print Report from this Page**
2. View RADAR as a printable report
3. Click the **Print** button in the report window to print.
Tips for Success

• Sort by most recent ARD to bring current issues to IDT meetings
  — Helps your team focus on most current clinical issues

• Use changes in QM Alerts and Profile Scores to guide care planning and risk management decisions
  — Drill down to identify specific risk factors

• Use Profile Scores to screen residents for rehab/restorative, pain management or palliative care programs
Need Help?

Use the Ask a Question page to submit a question to our online Help Desk.

1. Select “Ask a Question” from the Help menu.

2. Type your question in the text box and click the “Submit” button.
